Davor Matic

My experience with Davor Matic started in 2000 when I was the founding director of the European Natural Gas Vehicle Association (ENGVA) and Davor joined the association's Marketing Committee as a volunteer member. One of the first tasks undertaken by Davor was to participate in the 2000-2003 triennial natural gas vehicle (NGV) research/report of the International Gas Union (IGU). Thereafter, Davor took on the role as Chairman of the next two IGU triennial research projects, producing two outstanding reports: *Global Opportunities for Natural Gas as a Transportation Fuel for Today and Tomorrow* (2003-2006) and *GLOBAL NGV STRATEGY - How to achieve 50 million NGVs on the road in 2020* (2006-2009). As Chairman, Davor was able to effectively manage a team of volunteer gas industry stakeholders and produce two benchmark analytic reports that were referenced widely throughout the NGV industry and beyond. These reports remain as two of the stand-out contributions for the NGV work of the IGU and continue as models for subsequent triennial projects of the IGU.

Since then, Davor continues to demonstrate his skills and abilities as a natural gas industry analyst, project manager, gas trader, and general problem-solver across a wide range of assignments for a diverse set of natural gas stakeholders and companies both as an employee and senior consultant. His professional experience has been broad yet focused on specific challenges facing each of the entities – associations, public sector or private sector companies and clients -- for which Davor has worked. His assignments have spanned a variety of disciplines including marketing, technology development, legal/regulatory issues, as well as business and financial strategy and planning.

As an experienced problem-solver Davor provides insights, balance and personal enthusiasm to each of his professional assignments. As such he is an asset to any and all clients for whom he becomes engaged.
